

PLEATED SKYLIGHT BLINDS

PLEATED SKYLIGHT BLINDS are a white finished shade designed for Skylights, providing privacy, greater control of sunlight and reduction in noise levels. The blinds reduce furniture and carpet fading and save energy by lowering heating and cooling costs.

The shade is encased in an aluminium frame with a specially designed spring system, allowing you to position the blinds at any angle. Just like any other type of shade, depending on the amount they are opened or shut, the same amount of light will be filtered into the room.

Opened

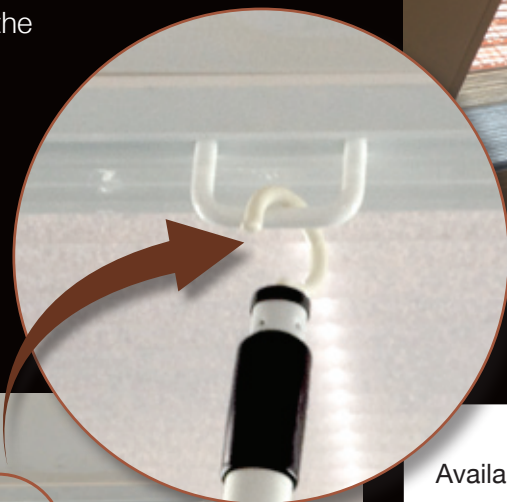

Closed

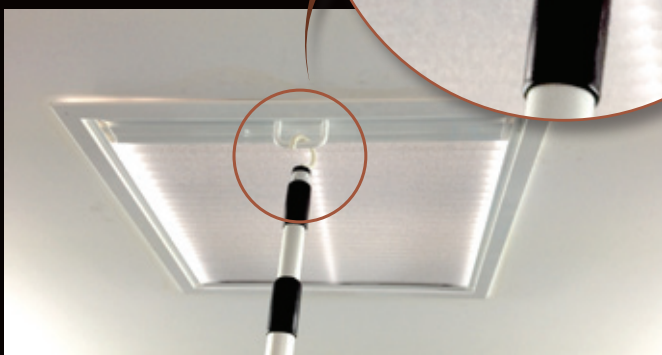

It is also available in a **Pleated Skylight Flyscreen** which is designed for roof windows which can be opened allowing you to enjoy fresh air while keep out unwanted insects.

The product can be made with a “blinds and flyscreen combination” encasing both the light blocking blinds and the insect barrier, in one convenient frame. Control the lighting with the blinds and enjoy the ventilation with the flyscreen, all within the same frame!

An optional extendable pole end fits the handle of the skylight blinds for those hard to reach skylights for ease of opening and closing.
